

Trace in Metal was established in early 2012 to recognise the potential of our patented, revolutionary system designed for infusing nickel microdots into lead and other metals.

Our service includes providing customers with an evidence pack incorporating witness statements and advice on creating victim-impact statements, saving law enforcement agencies hours of evidence gathering in the event of a theft. Our pack also includes valuable Crime Prevention and Crime Scene Management advice.

***The system provides a significant deterrent which increases the risk of arrest to both the thief and those dealing in stolen metal***
